The first of these is the fact that the
 number of cases of disease is not
 proportional to the number of persons
 exposed to the disease. This is
 because the disease is not
 equally infectious to all persons.
 Some persons are more susceptible
 than others, and some persons
 are more resistant than others.
 This is why the disease is not
 equally fatal to all persons.
 Some persons die, while others
 recover. This is why the disease
 is not equally contagious to all
 persons. Some persons can
 spread the disease, while others
 cannot. This is why the disease
 is not equally dangerous to all
 persons. Some persons are
 carriers of the disease, while
 others are not. This is why the
 disease is not equally preventable
 to all persons. Some persons
 can be vaccinated, while others
 cannot. This is why the disease
 is not equally curable to all
 persons. Some persons can be
 treated, while others cannot. This
 is why the disease is not equally
 preventable to all persons.
